Are we spending to plan?

Executive overview · A comparable-period view of performance and priorities

Application screenshot · All divisions · Select a division to focus the analysis

1 Compare the same period

Jan–Sep plan: $9,615,367.31.
Expenses: $9,686,931.97.
The annual budget is a separate baseline.

2 Find the pressure points

Expenses are $71,564.66 (0.74%) above plan. Monthly trends and division filters help focus investigation.

3 Prioritize the follow-up

10 open issues cover $188,892.83 under review. Open an issue for its source, owner and required action.

LEADERSHIP USE

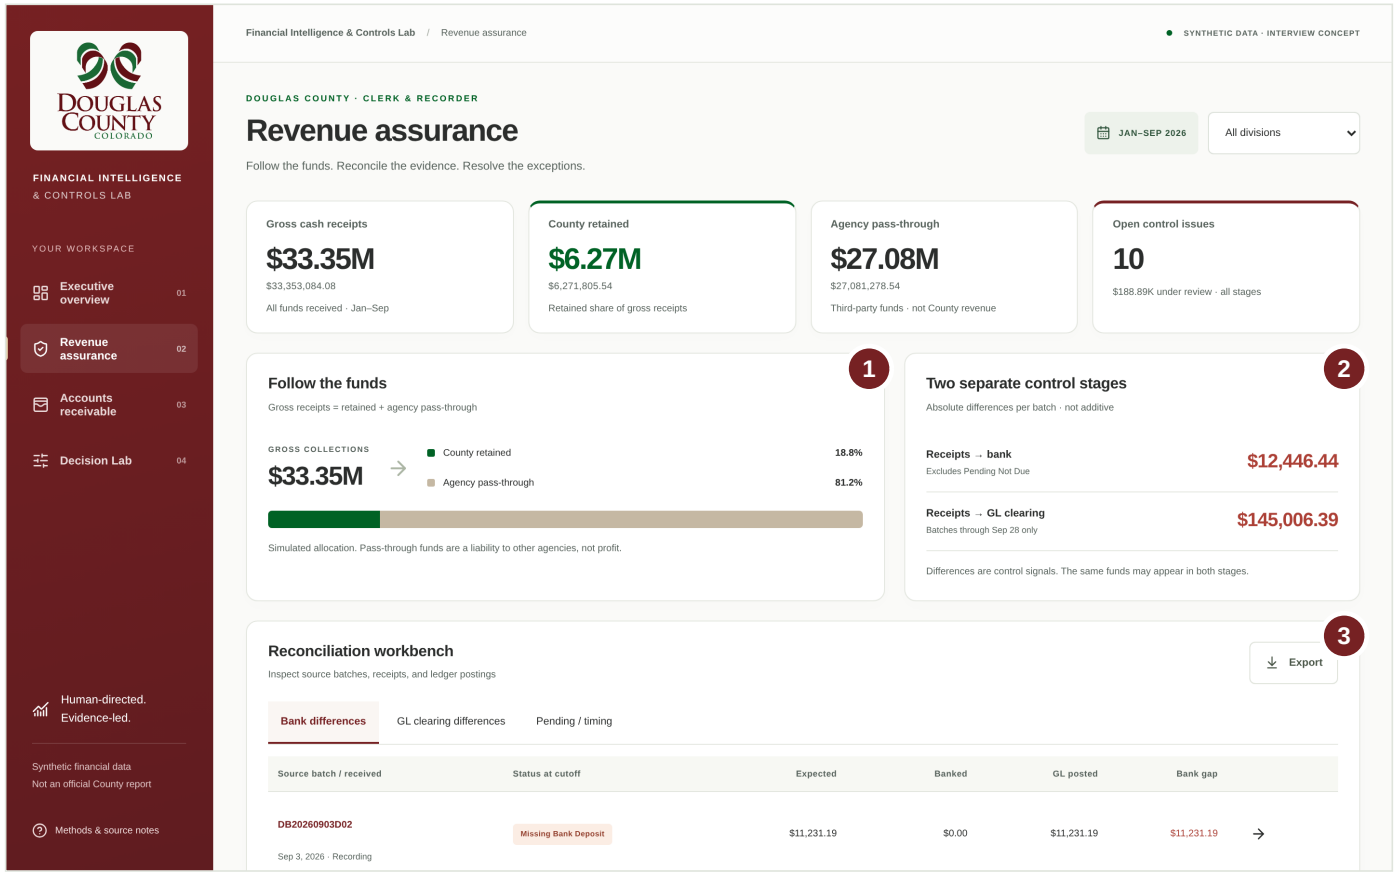

Identify which divisions drive the variance, then distinguish timing effects from recurring cost pressure.

FINANCIAL GUARDRAIL

Budget minus expenses is the variance. Under-review amounts are not established losses.

Can we account for the cash?

Revenue assurance · Follow collected funds through two separate control stages

Application screenshot · All divisions · More batch and exception detail is available below the fold

1 Separate ownership

County retained: 18.8% of gross receipts. Agency pass-through funds belong to other agencies; they are not County revenue.

2 Read each control stage

Bank absolute gaps: $12,446.44.
GL clearing: $145,006.39.
These stages are not additive.

3 Move from gap to evidence

Open a batch to inspect its receipts, banked amount and GL postings. The exception queue provides the accountable owner and follow-up.

LEADERSHIP USE

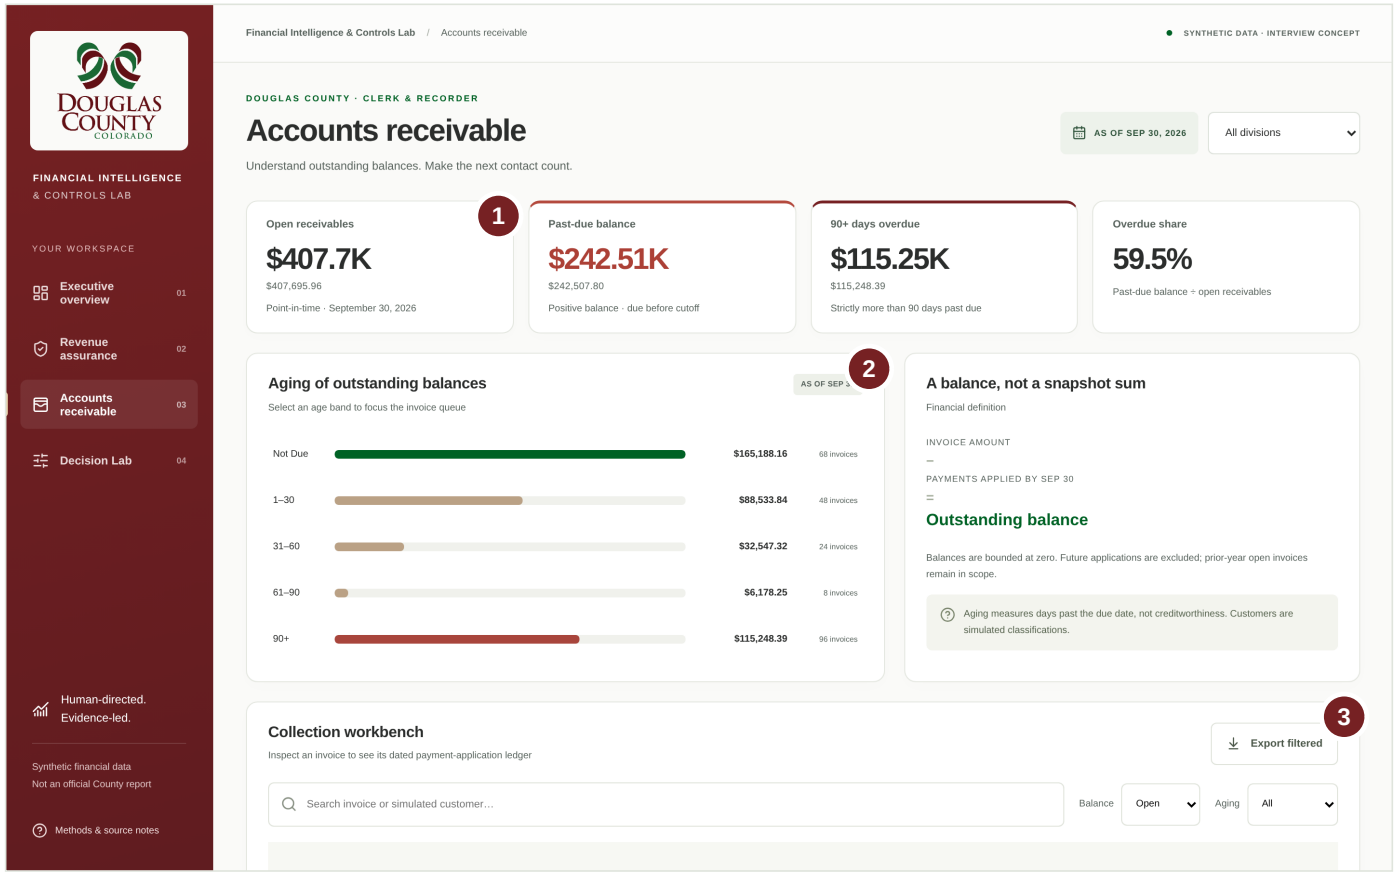

Trace the discrepancy to source records and assign reconciliation follow-up before drawing a conclusion.

FINANCIAL GUARDRAIL

Pending Not Due bank items are excluded. GL maturity uses an illustrative two-calendar-day buffer.

Which balances need action?

Accounts receivable · Reconstruct the balance, then organize collection work

Application screenshot · Fixed Sep 30 balance, including open prior-year invoices · More detail below

1 Start with an as-of balance

Open receivables: $407,695.96. Each invoice is reduced only by payment applications dated on or before September 30.

2 Rank the aging exposure

Past due: $242,507.80 (59.5% of open A/R).
More than 90 days overdue: $115,248.39. Select a bucket to focus.

3 Inspect the payment trail

Search, sort and open an invoice to see dated applications and partial payments. The remaining balance drives collection priority.

LEADERSHIP USE

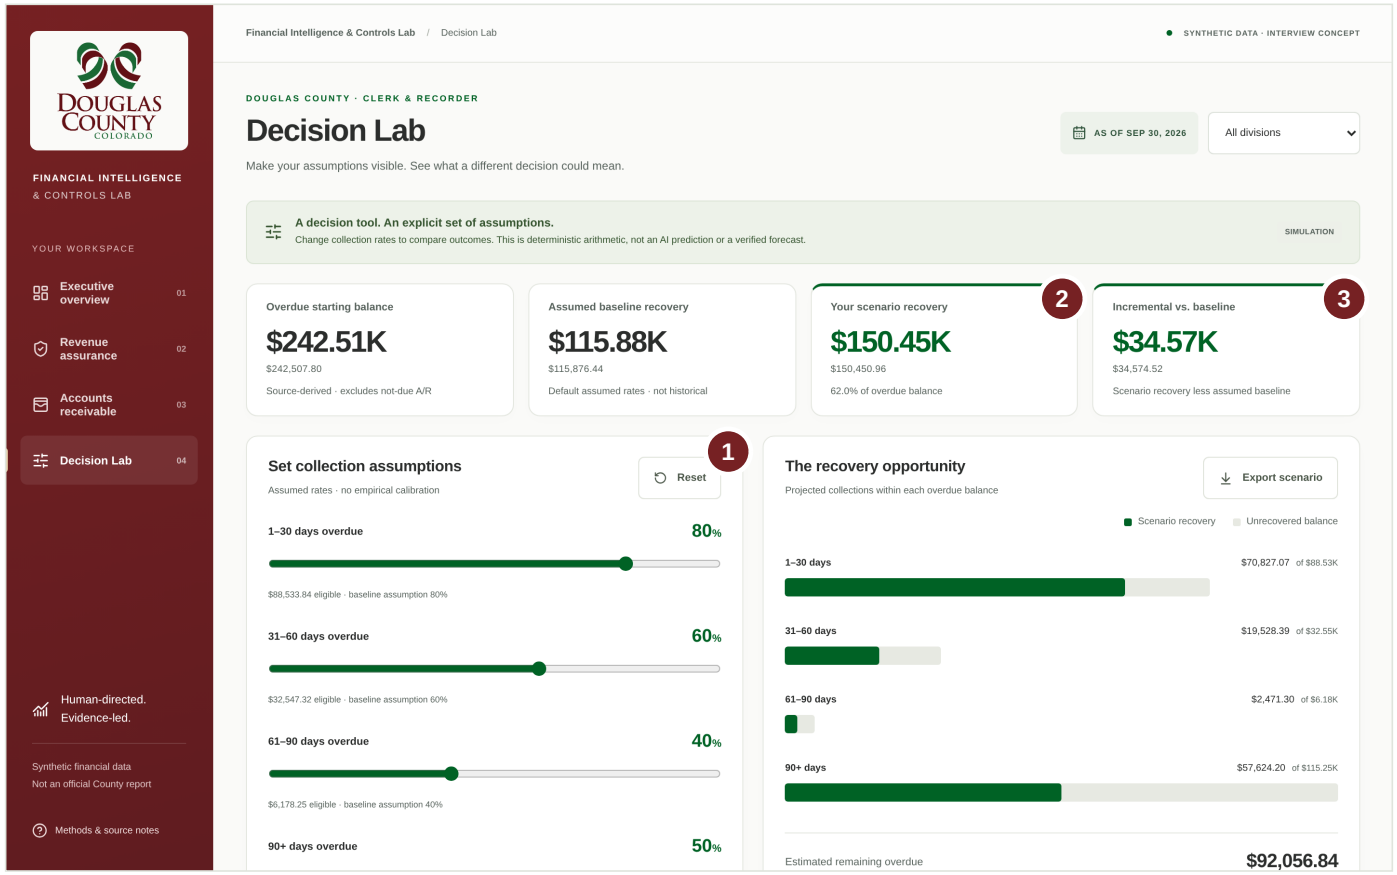

Use the aging and invoice evidence to decide which account owner or simulated customer needs the next contact.

FINANCIAL GUARDRAIL

Do not add monthly A/R snapshots. A 90+ balance means more than 90 days past due, not a creditworthiness judgment.

What changes if we act?

Decision Lab · A transparent comparison of assumed collection outcomes

Application screenshot · Illustrative scenario: 90+ rate = 50%; other defaults retained

1 Make assumptions visible

Example shown: raise the 90+ collection assumption from 20% to 50%. Hold the other assumed rates at 80%, 60% and 40%.

2 Compare with a baseline

Assumed baseline: $115,876.44.
Scenario recovery: $150,450.96.
Source A/R balances stay unchanged.

3 See the incremental effect

This example adds $34,574.52 in modeled recovery. Bucket balance × assumed rate produces each segment's result.

LEADERSHIP USE

Compare collection assumptions and use the source-grounded next actions to plan outreach. This is not a verified forecast.

HUMAN DIRECTION & AI GOVERNANCE

Human-defined rules; AI-built software. 43 source checks and 38 financial tests passed. Human judgment governs use.
